

Mountain View Innovation Centre – Supporting advanced patient monitoring for improved and more efficient healthcare.

It is hard to imagine a time when people couldn't have their physical health monitored digitally; fast forward 10 years and innovative companies like Isansys Lifecare have transformed the healthcare industry globally.

Since 2010, there has been a massive increase in the number of healthcare providers using digital and artificial (AI) technologies like the Patient Status Engine to monitor their patients' vital signs in real-time and wirelessly, and there are no signs of this slowing down.

Clinicians now want to streamline processes through the PSE to improve patient experience, increase efficiencies and save lives. The AFD Group, located at the idyllic Mountain View Innovation Centre just outside of Ramsey on the Isle of Man, has supported Isansys since 2012 when the company monitored its first patient with its first-generation PSE.

“Isansys has been thought-leading throughout, and the development of both the hardware and systems – in a clinically robust model, has produced world-beating technology. The Isansys technology is ready to go across the world – and is absolutely ripe for adoption as telemedicine develops. We are excited about working with such an innovative company and are looking forward to what the next 10 years will bring.”

David Dorricott

Managing Director of AFD

Over the last eight years, the AFD Group has been a major investor into the PSE, enabling Isansys to develop its technology further, bringing patient vitals into a real-time, anywhere, any-time clinical-grade solution. This disruptive technology fits with Mountain View Innovation Centre's vision which focuses on nurturing innovation - not only sharing physical space with fellow businesses, but providing a creative environment in which to turn good ideas into successful enterprises.
