

Patient Status Engine

More than – wireless vital sign monitoring

The Isansys Patient Status Engine allows you to know the status of your patients at all times. It allows you to discover and prevent patient deterioration whether you are monitoring 1 patient or 1000.

As an approved plug and play clinical platform, it continuously collects multiple vital sign data using smart wireless sensors, simply, securely and straight out of the box. It analyses and delivers patient status to any location in real time.

Today, Isansys is delivering complete patient digital monitoring systems with customised apps for a variety of clinical needs. Customisable apps include:

- NEWS** NEWS
Early warning notifications
- Health Check**
Data rich medical examination and screening
- Autonomic Function**
Baselining and tracking critical conditions

Clinical innovators – create your own apps

The Patient Status Engine is a unique tool enabling Healthcare Providers to easily generate big data sets for 1 or 1000 patients.

Isansys is working for clinicians and healthcare specialists who are combining their insight and experience with this new and exceptionally powerful knowledge of their patients. Unlocking the meaning in this data is leading to discoveries, creating apps that provide unprecedented understanding of the changes and trends in the clinical status of their patients.
